 I have since found out in reading the Owners Manual - and I wish Generac mentioned this in their brochures - that a 3-Pole transfer switch is required. In big bold print they state that the unit will not work with a 2-Pole. I called the electrician and I understand it's now a matter of how the GPI interacts, neutral bonding, etc.

 Three-pole transfer switches with overlapping neutral contacts. This type of transfer switch offers many advantages, including the following: • It operates with little or no arcing, which minimizes the risk of erosion or degradation of the neutral contact. However, a 3-pole transfer switch with overlapping neutral contacts has several drawbacks. One disadvantage is the design and construction of the neutral pole and contacts.

 A 3-pole transfer switch with a switched neutral is single phase. The switching mechanism will break the two hot legs of the circuit, in either direction, before the neutral is broken. It will then close the neutral before the two hot legs close, preventing the generator's circuit breakers from nuisance tripping and protects inductive motors and sensitive loads.

A representative electromagnetic pulse from a high altitude burst will typically have maximum field strengths near the ground on the order of 50 kV/meter and a time duration on the order of a microsecond and rise times on the order of 10 nanoseconds. Installation of EMP protective measures as a retrofit to existing installations is more costly that would have been required if included in the original design and construction. A basic approach for EMP protection of small city, county and State facilities includes containment of communications equipments in a minimus size, double layer galvanized steel wire mesh enclosure, with operators and hand sets adjacent to or remote from the shielded enclosure with connecting cables run in ferrous conduit with threaded couplings. Power cables should be contained in ferrous conduit and there should be a single panel entry of power, hand sets, control, and antenna cable conductors.
