World Health Organization defined 'adolescence' as age group of 10-19 years. Being the period of transition from childhood to adulthood, it is the time to build healthy behavior, attitude and lifestyle that contribute to current and future health. Serious health and safety issues such as motor vehicle crashes, violence, injuries from aggression and suicidal ideation often aggravated by alcohol and illicit drugs, increased susceptibility to chronic diseases from substance use, and risky sexual behaviors from sexual experimentation can adversely affect adolescent population. Given the nature and consequences of adolescent risk behaviors there is an imperative need to understand the entire array of these interrelated risk behaviors and promote activities to alter the circumstances that give rise to and sustain such cluster. A community based descriptive type of study, conducted in cross sectional design among 1109 school going adolescents belongs to class IX-XII in the district of Burdwan, West Bengal. The objectives of the study were: 1. To assess certain risk behaviors among the adolescent students 2. To compare whether the findings varied between age, sex and urban-rural differences.

Adolescence is a time when youth make decisions, both good and bad, that have consequences for the rest of their lives. Some of these decisions put them at risk of lifelong health problems, injury, or death. The Institute of Medicine held three public workshops between 2008 and 2009 to provide a venue for researchers, health care providers, and community leaders to discuss strategies to improve adolescent health.

A thorough and authoritative record of the best available assessment tools in health psychology. Assessment in Health Psychology presents and discusses the best and most appropriate assessment methods and instruments for all specific areas that are central for health psychologists. It also describes the conceptual and methodological bases for assessment in health psychology, as well as the most important current issues and recent progress in methods. A unique feature of this book, which brings together leading authorities on health psychology assessment, is its emphasis on the bidirectional link between theory and practice. Assessment in Health Psychology is addressed to masters and doctoral students in health psychology, to all those who teach health psychology, to researchers from other disciplines, including clinical psychology, health promotion, and public health, as well as to health policy makers and other healthcare practitioners. This latest volume in the series Psychological Assessment - Science and Practice provides a thorough and authoritative record of the best available assessment tools and methods in health psychology, making it an invaluable resource both for students and academics as well as for practitioners in their daily work.

Drug abuse has emerged as the leading factor associated with transmission of HIV, and AIDS is the leading cause of mortality among drug-dependent individuals. Through Effects of Substance Abuse Treatment on AIDS Risk Behaviors, you will discover how drug treatment programs are becoming instrumental in reducing the risks of HIV/AIDS among substance abusers. Needle sharing is a major contributor to contracting HIV/AIDS but, as this book shows you, sexual risk behaviors from sex-trade workers, as well as risky behaviors due to the influence of cocaine and methamphetamines, contribute to the spread of HIV/AIDS. From Effects of Substance Abuse Treatment on AIDS Risk Behaviors, you will discover drug abuse treatment methods that will reduce the number of injection episodes and reduce injection use in higher risk settings, such as shooting galleries, thereby reducing your clients' risk of infection. Effects of Substance Abuse Treatment on AIDS Risk Behaviors reveals the stark realities regarding substance abusers and HIV risk. Through this compelling book, you will gain

Download Ebook An Essment Of Risk Behaviors Among The Adolescent Students An Essment Of Risk Behaviors Among The Adolescent Students In The District Of Burdwan West Bengal

new insight into how you can help drug abusers avoid contracting HIV/AIDS by: discussing intervention methods that do not adhere to abstinence-based treatment models, such as reducing a stimulant binge by one day examining the dangerous effects that methadone clinics, who discharge patients for cocaine use, can have on the reduction of risk behaviors among heroine addicts discovering the correlation that exists between the fact that opioid-dependent individuals who have more drug and legal problems are at a higher risk for AIDS risk behaviors With Effects of Substance Abuse Treatment on AIDS Risk Behaviors, you will discover how stimulant drug treatment in itself represents a potentially powerful HIV prevention method by allowing the individual to make more thoughtful decisions regarding their sexual behaviors. Through this insightful volume, you will also learn essential information pertaining to different regions of the country, allowing you to effectively tailor your treatment program for your community. For example, in urban areas of the Western United States, the greatest risk of HIV infection is from non-injected stimulants. Effects of Substance Abuse Treatment on AIDS Risk Behaviors will prove to you how drug treatment programs can significantly reduce the spread of HIV/AIDS and make lower infection rates a reality.

Adolescence is a developmental period of accelerating physical, psychological, social! cultural, and cognitive development, often characterized by confronting and surmounting a myriad of challenges and establishing a sense of self-identity and autonomy. It is also, unfortunately, a period fraught with many threats to the health and well-being of adolescents and with substantial consequent impairment and disability. Many of the adverse health consequences experienced by adolescents are, to a large extent, the result of their risk behaviors. Many adolescents today, and perhaps an increasing number in the future, are at risk for death, disease, and other adverse health outcomes that are not primarily biomedical in origin. In general, there has been a marked change in the causes of morbidity and mortality among adolescents. Previously, infectious diseases accounted for a disproportionate share of adolescent morbidity and mortality. At present, however, the overwhelming toll of adolescent morbidity and mortality is the result of lifestyle practices.

Adolescents obviously do not always act in ways that serve their own best interests, even as defined by them. Sometimes their perception of their own risks, even of survival to adulthood, is larger than the reality; in other cases, they underestimate the risks of particular actions or behaviors. It is possible, indeed likely, that some adolescents engage in risky behaviors because of a perception of invulnerability-the current conventional wisdom of adults' views of adolescent behavior. Others, however, take risks because they feel vulnerable to a point approaching hopelessness. In either case, these perceptions can prompt adolescents to make poor decisions that can put them at risk and leave them vulnerable to physical or psychological harm that may have a negative impact on their long-term health and viability. A small planning group was formed to develop a workshop on reconceptualizing adolescent risk and vulnerability. With funding from Carnegie Corporation of New York, the Workshop on Adolescent Risk and Vulnerability: Setting Priorities took place on March 13, 2001, in Washington, DC. The workshop's goal was to put into perspective the total burden of vulnerability that adolescents face, taking advantage of the growing societal concern for adolescents, the need to set priorities for meeting adolescents' needs, and the opportunity to apply decision-making perspectives to this critical area. This report summarizes the workshop.
