Are zebra mussels really invading

Ridding water bodies and infrastructure of the invasive species is difficult and costly for water utilities and power generation facilities – a real concern that is complicated by fake news. Zebra mussels are fearsome creatures, considering their small size. They are hardy. They breed in massive numbers. They spread rapidly.

Four Zebra Mussel Myths And Where They Went Wrong

Zebra mussels have become an invasive species in North America, Great Britain, Ireland, Italy, Spain, and Sweden. They disrupt the ecosystems by monotypic colonization, and damage harbors and waterways, ships and boats, and water-treatment and power plants. Water-treatment plants are most affected because the water intakes bring the microscopic, free-swimming larvae directly into the facilities.
