Adaptive Bass Linearisation (ABL) is a process patented by B&O and is incorporated in BeoLab loudspeakers. The idea is to use the surplus capacity in amplifiers and driver units, arising by normal listening levels, for a bass extension - a sound reproduction with more bass, than the loudspeaker otherwise would be able to produce.

Under the guidance of Moeran and Christensen, the authors in this volume examine evaluative practices in the creative industries by exploring the processes surrounding the conception, design, manufacture, appraisal and use of creative goods. They describe the editorial choices made by different participants in a 'creative world', as they go about conceiving, composing or designing, performing or making, selling and assessing a range of cultural products. The study draws upon ethnographically rich case studies from companies as varied as Bang and Olufsen, Hugo Boss and Lonely Planet, in order to reveal the broad range of factors guiding and inhibiting creative processes. Some of these constraints are material and technical; others are social or defined by aesthetic norms. The authors explore how these various constraints affect creative work, and how ultimately they contribute to the development of creativity.

While it's inevitable that all of us will traumatize our children, even the most committed parents have lacked guidance to do so deliberately and effectively. Whether you want to traumatise your kids the same way your parents used to or use a different approach, this book shows you the way.

Computing devices have become ever more present in our everyday environments, however embedding these technologies into our routines has remained a challenge. This book explores the novel theory of peripheral interaction to rectify this. This theory examines how interactive systems can be developed in such a way to allow people to seamlessly interact with their computer devices, but only focus on them at relevant times, building on the way in which people effortlessly divide their attention over several everyday activities in day to day life. Capturing the current state of the art within the field, this book explores the history and foundational theories of peripheral interaction, discusses novel interactive styles suitable for peripheral interaction, addresses different application domains which can benefit from peripheral interaction and presents visions of how these developments can have a positive impact on our future lives. As such, this book's aim is to contribute to research and practice in fields such as human-computer interaction, ubiquitous computing and Internet of Things, a view on how interactive technology could be redesigned to form a meaningful, yet unobtrusive part of people's everyday lives. Peripheral Interaction will be highly beneficial to researchers and designers alike in areas such as HCI, Ergonomics and Interaction Design.

When you're reading a book, what pulls you in? Is it the Magic U? Duncan Youze sneaks outside at night to look for "a Magic U that makes your bestest wish come true." His big sister Holly follows to keep him out of trouble. But a stranger chases them from the playground into the woods where they discover a writer's cottage and a secret passage. When the stranger returns, Holly and Duncan open a door and take off on a wild flight of imagination into one fantastic world after another... A beefy boy who can fly. A rainbow-stabbing rabbit. A wolf in ewe's clothing. Two lost dinosaurs. A realm of stuffed animals ruled by an articulate infant princess wise beyond her months. These are just a few of the many characters Holly and Duncan meet as they flee the stranger through a maze of amazing worlds. But will they ever find their way home? Anything can happen in The Magic U... Open a door, open a book, and see.

This volume, which includes essays by women scientists, reseachers, journalists, and administrators, investigates how gender analysis can spark creativity in science and engineering.
