Guide to Camera Lens Filters - Types and how to use them

Originally, UV filters were also used to cut out UV light when shooting with a film camera. These days, digital cameras can eliminate UV light on their own. However, having some protection for your lens glass is still a good plan, and if you get the Formatt-Hitech Firecrest UV filter shown above, it'll improve the contrast and acuity of your images, too.

A Guide to Lens Filters for Absolute Beginners

Neutral density filters help you achieve extreme long exposures, while graduated neutral density filters help balance exposure between a bright sky and a dark foreground. Both were used in this image. The exposure time was three minutes.

Beginner's Guide to Buying Filters

Neutral density filters (ND filters) act like sunglasses for your camera, either for a portion of the frame or for your entire shot. ND filters are usually rated from 1-10 stops. In other words, that ' s the amount of stops by which you can reduce your shutter speed once you ' ve mounted the filter on your lens.
