Cells are the basic unit of all forms of life. In this section we explore how structural differences between types of cells enables them to perform specific functions within the organism. These differences in cells are controlled by genes in the nucleus. For an organism to grow, cells must

REVISION

The nucleus is one of the most important organelles in a cell. It is often the largest organelle in animal cells, but this is not always the case.

Nuclei contain the genetic material called DNA that is

Download Free Cell Biology

responsible for controlling and directing all cell activities. This is a very important organelle given its vital function.
