The plant growth stage is determined by main stem and number of tillers per plant e.g. GS22 is main stem plus 2 tillers up to GS29 main stem plus 9 or more tillers. In Australian cereal crops plants rarely reach GS29 before the main stem starts to stem elongate (GS30).

Cereal growth stages are published near the back of this guide. The key growth stages – crop emergence (GS10), the start of stem extension (GS31), flowering (GS61) and the end of grain filling (GS87) – separate the key development phases: ‘foundation’, ‘construction’ and ‘production’, as explained in Figure 7.
