A fourth spatial dimension is presented by analogy with the life of A Square, 2-D citizen of Flatland, whose existence is, quite literally, turned around by his encounter with a 3-D sphere. Non-Euclidean geometry and curved space becomes easier to grasp with reference to Flatland and its dimensionally impoverished inhabitants, where even a straight line can be shown to bend in the direction of a higher dimension.

The Fourth Postulate will hold on the Flat Saddle since all of the " straight lines " are smooth (differentiable) curves. A way in which the Fourth Postulate could fail would be for us to work with a curved-space model that had a little peak on it somewhere.

Geometry, relativity, and the fourth dimension

This is the first sustained visual account of many important topics in relativity theory that up till now have only been treated separately. Finding a perfect analogy in the situation of the geometrical characters in Flatland, Professor Rucker continues the adventures of the two-dimensional world visited by a three-dimensional being to explain our three-dimensional world in terms of the fourth dimension.
