Based on geotechnical and hydro-geotechnical characteristics of geomaterials of soil, rock, and water, the behaviors of retaining wall interacting with driving forces and resisting forces toward wall instability are explained in detail.

Engineering Series - Earth Retaining Structures

This online engineering PDH course, as a part of Geotechnical Engineering Series, covers basic theories, engineering analyses, and practical approaches for design of retaining structures. As a special case of an earthen slope with a truncated toe,

earth retaining structure is used to hold back the earth and to maintain a vertical or near vertical elevation difference of the ground surface, for the benefit of saving space.

structures (ERS) can also be classified according to the method required for their construction, i.e., fill construction or cut construction. Fill wall construction refers to a wall system in which the wall is constructed from the base of the wall up to the top, i.e., [bottom-up] construction.
