Existing material has been expanded and re-ordered, so that some concepts - such as simple data types and input/output - are presented at an earlier stage.

This is a first course in  
programming. It makes  
use of a programming  
language called Haskell,  
in which programs can  
be viewed as

mathematical functions.

This makes the language very powerful, so that we can easily construct programs that would be difficult or very large in other languages.
