Access Management has been added as a new process to ITIL V3. The decision to include this dedicated process was motivated by Information security reasons, as granting access to IT services and applications only to authorized users is of high importance from an Information Security viewpoint. In ITIL 2011 an interface between Access Management and Event Management has been added, to emphasize that (some) Event filtering and correlation rules should be designed by Access Management to support ...

ITIL Access Management Process Flow Chart. Posted on December 25, 2013 by teekaleone - Leave a comment. Merry Christmas Everyone! While waiting for the meal to cook & guests to arrive, I figured I'd do a quick post as promised to give you an example of a flow chart for the ITIL Access Management Process. The flow follows the narrative in my last post but basically shows the roles on the left and the actions that those roles are responsible for within the swim lanes.
