Joint Commission to require annual PPRs beginning in 2006. Many home health managers initially were apprehensive about periodic performance reviews (PPR), the self-evaluation required by the Joint Commission on the Accreditation of Healthcare Organizations at the midpoint of an accreditation cycle. However, the response to the process following the implementation has been so positive that the Joint Commission will make the PPR an annual requirement beginning in 2006.

~~Your agency has one year to prepare for JCAHO annual self ...~~

The Joint Commission on Accreditation of Healthcare Organizations (JCAHO) currently does not require any self-assessment before the first survey, while the Accreditation Commission for Healthcare (ACHC) and the Community Health Accreditation Program (CHAP) both require preliminary documentation, and both allow six months to prepare and submit this material.

It is a mainstay of the revised Joint Commission on Accreditation of Healthcare Organizations (JCAHO) home care standards and a re-engineering buzzword. But sources say some providers are struggling with its implementation, bogging down in details, or glossing over plans that could significantly affect patient outcomes rather than just meeting JCAHO intent.

Nursing

A great resource for your home care and hospice staff. The new 2012 Standards for Home Health, Personal Care and Support Services, and Hospice can help you quickly and easily find the standards and scoring information you need. It puts the latest accreditation requirements, policies, and procedures at your fingertips. It also includes scoring information at every element of performance, including scoring category, criticality, documentation requirement, and Measure of Success. The 2012 Standards for Home Health, Personal Care and Support Services, and Hospice has color-coded tabs, allowing you to find exactly what you need when you need it: The 2012 standards, National Patient Safety Goals, and Accreditation Participation Requirements only for home health, personal care and support services, and hospice organizations Updated accreditation process chapter, which includes new decision categories and the 2012 home care accreditation decision rules, and sentinel events chapter Applicability grids at each standard to identify setting-specific requirements for your home health, personal care and support services, or hospice organization An appendix listing Medicare requirements for hospice This 6 x 9 softcover, spiral-bound book makes a perfect reference guide handy in meetings, for orientation and training, and as a practical overview of the Joint Commission s accreditation requirements for all your staff.

Professional reference for Nurses on Home Health Care

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.

Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS--three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. To Err Is Human breaks the silence that has surrounded medical errors and their consequence--but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda--with state and local implications--for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs

perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors--which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. *To Err Is Human* asserts that the problem is not bad people in health care--it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates--as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine
