The photos in this edition are black and white. Mitsubishi's 4G63t engine is among the most powerful engines ever in the sport-compact world. It's not uncommon to find one of these four-cylinder, iron-block, aluminum-headed, 2-liter turbocharged monsters making more than 1,000 horsepower with the right modifications and tuning - well above the 200-300 hp produced in the factory-made engines. Bolted into such cars as the Mitsubishi Lancer Evolution, Eclipse, and Galant, and the Eagle Talon and Plymouth Laser, the 4G63t has more than a cult following among sport-compact enthusiasts, who know and respect this engine's immense performance potential at the track or on the street. Up until now, in-depth performance information on the 4G63t has been hard to find. For this book, author Robert Bowen went straight to the source, Robert Garcia of Road/Race Engineering in Santa Fe Springs, California. RRE is the most well-known and respected Mitsubishi turbo performance shop in the United States, and Garcia is its in-house engine builder. Mitsubishi enthusiasts will benefit from Garcia's expertise and be able to build better, stronger engines than ever before. "How to Build Max-Performance Mitsubishi 4G63t Engines" covers every system and component of the engine, including the turbocharger system and engine management. More than just a collection of tips and tricks, this book includes a complete history of the engine and its evolution, an identification guide, and advice for choosing engine components and other parts. Profiles of successful built-up engines show the reader examples of what works, and the book includes helpful guidance for choosing your own engine building path.

Information on routine servicing and repair for the DIY mechanic, with tasks described and photographed in a step-by-step sequence.

When the time comes for a judge or jury to render a verdict in a lawsuit, rarely is there sufficient objective scene data or eye witness testimony to help them determine what happened in the critically deciding seconds of a crash. The purpose of motor vehicle accident reconstruction is to determine what happened at a particular point in time in accidents with respect to drivers, vehicles, objects, pedestrians and others. The Seventh Edition of Motor Vehicle Accident Reconstruction and Cause Analysis provides the novice or experienced attorney, expert witness, and investigator with fundamentals necessary to properly formulate a case, collect critical data, and apply proven engineering concepts in the reconstruction and cause analysis of accidents. The revisions and additions in the Seventh Edition include numerous chapter review questions, hints for expert testimony and report writing, and guidance on when to retain an expert. There are also discussions of case formulation errors and how costly mistakes can be avoided, as well as many MARC1 software applications and analysis of actual crashes, along with a discussion of how a successful resolution of a particular case is most likely to be achieved. The new looseleaf binder design allows the Seventh Edition to become a living document, both in terms of personal use as well as future supplements. Readers using MARC1 Accident Reconstruction Software in their forensic praxis will find the Seventh Edition a helpful tool in effectively using MARC1. MARC1 software applications have been added to make the analysis of complicated calculations an easy and efficient task. The novice lawyer and the expert working his or her first traffic case or the "old pro" will benefit greatly from the experience gained by the author in nearly 350 trial testimonies, 800 depositions, and over 3,000 accident reconstructions.
