Although inflammation is the hallmark of most infectious diseases, it may also be associated with neoplasia and dysplasia (e.g., inflammatory carcinoma), autoimmune diseases (i.e., rheumatoid nodule; figure 1D), allergic responses (i.e., hypersensitivity pneumonitis), metaplastic reactive and reparative changes (i.e., reflux esophagitis and Barrett's metaplasia), and idiopathic disorders such as Wegener's granulomatosis and sarcoidosis. Many of these noninfectious disorders are treated with ...

Pathology, however, is the only way to correlate the presence of an infectious agent with the reaction it evokes at cell and tissue level. For pathologists working in the field of ID pathology, it is essential to dispose of competence in cell and tissue pathology as well as in microbiology. Expertise in ID includes understanding of taxonomy and classification of pathogens as well as morphological criteria supporting their identification.
