Read PDF Photodynamic Medicine From Bench To

Photodynamic therapy (PDT) is a treatment that involves light-sensitive medicine and a light source to destroy abnormal cells. It can be used to treat some skin and eye conditions, as well as certain types of cancer. On their own, the medicine and light source are harmless, but

Read PDF Photodynamic Medicine From Bench To

when the medicine is exposed to the light, it activates and causes a reaction that damages nearby cells.

Photodynamic therapy (PDT) - NHS
PDT is used to treat a variety of cancer types. Skin cancer is the most common type of cancer typically

Photodynamic therapy (PDT) is a two-stage treatment that combines light energy with a drug (photosensitizer) designed to destroy cancerous and precancerous cells after light activation. Photosensitizers are

Read PDF Photodynamic Medicine From Bench To

activated by a specific wavelength of light energy, usually from a laser. The photosensitizer is nontoxic until it is activated by light.
