analyzing potential solutions to consider, and providing practical examples from countries that have addressed broadband-related matters.

The knowledge of how to use information technology is a critical human capability for a person to realize the various things he/she values doing or being in all dimensions of his/her life. At the center of this process is a person's ability to access, process and act upon information facilitated through the use of new technologies.

Access to broadband connectivity is a country's passport to the global information society and knowledge economy the future. However, the adoption and use of broadband technology today remains extremely uneven and threatens to create a new digital divide. At the end of 2009, countries in North America and the European Union accounted for more than 50 percent of the world's 1 billion fixed and mobile broadband subscriptions, but South Asia and Sub-Saharan Africa together accounted for less than 3 percent. The experience with mobile telephony though shows the potential for growth in the information and communication technology sector in developing countries. Almost 75 percent of the world's mobile telephone subscriptions are in low- and middle-income countries, which have also promoted exciting innovations and realized significant economic development benefits. In fact, a growing number of countries are seeking to spur broadband development. To aid governments as they design their own programs, this volume offers examples and ideas from some of the most successful broadband markets: particularly the Republic of Korea, but also Finland, France, Japan, Sweden, the United Kingdom, and the United States. 'Building Broadband' does not suggest a universal solution but rather provides a long list of policies and

programs organized within a strategic framework that allows solutions tailored to country circumstances. The essential building blocks identified are useful everywhere because they focus on improving incentives and the climate for private investment. This is a policy that even countries with very limited resources will be able to exploit.

Over the last several decades, an astonishing phenomenon has developed: a Jewish rebirth of sorts occurring throughout Africa. Different ethnic groups proclaim that they are returning to long forgotten Jewish roots and African clans trace their lineage to the Lost Tribes of Israel. *The Black Jews of Africa* addresses the elaboration and the development of Jewish identities by Africans, and presents one by one the different groups of Black Jews from western central, eastern and southern Africa and the ways in which they have used and imagined their oral history and traditional customs to construct a distinct Jewish identity.

All network designers and administrators want their campus LANs to run efficiently. This book provides tips and techniques for using protocol analyzers and other tools to recognize problems for both Cisco and multiprotocol traffic patterns. * Focuses on troubleshooting problems that arise from the Cisco routers inter-operating with many other network protocols * Covers both legacy and cutting-edge technologies * Authors are respected in the field for their teaching and training development skills in network troubleshooting

Presents a teacher resource kit for study and teaching information technology, information storage and retrieval systems, and electronic data processing in secondary school classrooms.

Urges governments to expand quality education for all, increase community access to information and communication technology, and improve cross-border scientific knowledge-sharing, in an effort to

narrow the digital and "knowledge" divides between the North and South and move towards a "smart" form of sustainable human development.

Knowledge society suggests the possibility of institutions and organizations that enable people and information to develop without limits, and that open opportunities for all kinds of knowledge to be mass-produced and mass-utilized throughout the society as a whole. The report notes the understanding of knowledge society often remains erroneous of shallow. At the same time deep transformative currents related to knowledge and its production and dissemination in society promise to change the world as we know it. Understanding this pattern of change will impact on our policy choices with long term consequences. Responsible policy choices are needed for a future where knowledge is secured to support high levels of quality and safety of life for all people everywhere. The report proposes an index of knowledge societies and makes recommendations for governments, political and economic elites, business, civil society, news media and academic communities
