Electrophotography (also called xerography), the technology inside the familiar copier, has become increasingly important to modern society. Since the first automatic electrophotographic copiers were introduced in 1959, they have become indispensable to the modern office and now constitute a multi billion dollar industry involving many of the world's largest corporations. By the 1990s, it is expected that electrophotography will be one of the most prevalent printer technologies. This will occur because of the growing need for printers that are quiet, that can produce multiple fonts, and that can print graphics and images. Electrophotographic printers satisfy these requirements and have demonstrated economic and technical viability over an enormous speed range, from 6 to 220 pages per minute, with output quality that approaches offset printing. Organizations contemplating designing a new electrophotographic copier or printer need to deal with two sets of issues. First, for each of the six process steps in electrophotography there are several different technologies that must be evaluated and chosen. For example, there are three development technologies (dual component, mono component and liquid); cleaning can be done with a blade or brush; and the photoconductor can be inorganic or organic, either of which can be configured in the form of a belt or a drum. Second, once a technology for each step is chosen, it must be optimized and integrated with the other process steps. This optimization and integration is facilitated by a firm scientific understanding of the technologies being considered.

800x600 This new case study examines how Ricoh successfully created a hybrid supply chain strategy for its office imaging equipment products. It shows how Ricoh has spent more than ten years on continuous process reforms to create an exceptionally efficient and responsive supply chain. It introduces the activities undertaken by Ricoh's cross-functional committee to achieve process reforms, stimulates exploration of why continuous process reforms are required, and explains what must be done

Both qualitative and quantitative cases are included; quantitative cases are supported by completed numerical solutions, and, where applicable, associated spreadsheets.
