I guess Sheldon Axler decided on the ungrammatical "Linear Algebra Done Right" to avoid "Linear Algebra Done Properly" or something similar, which would have sounded intolerably arrogant. He justifies this title repeatedly by rather obnoxiously flaunting his determinant-free proof that operators on complex (or real, odd-dimensional) vector spaces have an eigenvalue.

I recently started reading Sheldon Axler's Linear Algebra Done Right and I find the formatting and design of the text quite appealing. I provided a page as an example. What I'm interested in the most is how the text boxes are created and how the text in the body wraps around the boxes correctly. How could I create text boxes like that?

Ford Award for expository writing from the Mathematical Association of America. Abstract: This paper shows how linear algebra can be done better without determinants. The standard proof that a square matrix of complex numbers has an eigenvalue uses determinants.

"Every discipline of higher mathematics evinces the profound importance of linear algebra in some way, either for the power derived from its techniques or the inspiration offered by its concepts. Axler demotes determinants (usually quite a central technique in the finite dimensional setting, though marginal in infinite dimensions) to a minor role.
