As you manipulate equations to solve them, you must keep both sides balanced.

Whatever you do to one side

of the equation, you must do  
to the other side. So, if  
you need to add a value to  
isolate the variable, you  
must also add that same  
value to the other side of  
the equation. For example,  
in the equation.  $x - 9 = 5$ .
