Enzymes

Lab+Manual-enzymes - Student Manual Background Enzymes are ...

Enzymes are proteins that catalyze biochemical reactions by lowering the activation energy necessary to break the chemical bonds in reactants and form new chemical bonds in the products. Catalysts bring reactants closer together in the appropriate orientation and weaken bonds, increasing the reaction rate.

Download Ebook Student Manual Background

Enzymes Most enzymes are proteins, although a few are catalytic RNA molecules. Catalytic RNA molecules are called ribozymes. Enzymes are high molecular weight compounds made up principally of chains of amino acids linked together by peptide bonds (Figure 1). Enzymes can be denatured and precipitated with salts, solvents and other reagents.

An Introduction to ENZYMES 122019-v6

A plasmid is an ideal vector for carrying DNA sequences from one organism to another. The plasmid is equipped with (1) a promoter that enables gene transcription, (2) a sequence for the initiation of DNA replication, and (3) an

Antibiotic resistance gene.

AMGEN BIOTECH EXPERIENCE STUDENT GUIDE

Enzymes are biological catalysts, they increase the speed of a chemical reaction. They are large protein molecules and these enzymes are very specific to certain reactions. Hydrogen peroxide decomposes slowly in light to produce oxygen and water. There is an enzyme called catalase that can speed up (catalyse) this reaction.

Enzyme ppt - SlideShare

Enzymes are biomolecules that catalyze (i.e. increase the rates of) chemical reactions. Almost all enzymes are proteins. In enzymatic reactions, the molecules at the beginning of the process are called substrates, and the enzyme converts them into different molecules, the products.
