Generally, multi-stage models for supply chain design and analysis can be divided into four categories, by modeling approach. In the cases included here, the modeling approach is driven by the nature of the inputs and the objective of the study. The four categories are: deterministic analytical models, in which the variables are known and specified

Supply Chain Design and Analysis: Models and Methods

The three responsive supply chain models are the agile model, the flexible model, and the custom configured model. These models are ideal for “on demand” situations. They are ideal when there is a level of uncertainty in the product manufacturing.
