Work With Testing? -
Testim Blog

Once we have
continuous integration
and test automation in
place, we create a
deployment pipeline
(the key pattern in
continuous delivery).

In the deployment
pipeline pattern, every
change runs a build
that a) creates

packages that can be deployed to any environment and b) runs unit tests (and possibly other tasks such as static analysis), giving feedback to developers in the space of a few minutes.

There is no way to automate delivery to users if there is a manual, time-consuming step within the delivery process. CD is a part of a greater deployment pipeline.
