The Biology of Human Longevity - 1st Edition

A description of some of these biologically based limits on human longevity imposed by body design, including the Achilles heel of an aging brain, was described years ago by Olshansky and colleagues (12, 13). The fact is, humans cannot run as fast as a cheetah, jump as high as a gazelle, or live as long as a Greenland shark (392 ± 120 years) because the body design of each species, which is based on a genetically determined set of life history attributes that evolved over millions of years ...
