An attempt is made in the present paper to resolve inconsistencies between the results of recent studies which have reported that bilingualism is associated with positive cognitive consequences and earlier studies which suggested that bilingualism might adversely affect cognitive and scholastic progress. Because recent studies involved balanced bilinguals and were carried out in "additive" bilingual settings, the bilingual subjects in these studies are likely to have attained a high level of ...

tating influence of bilingualism on cognition. Peal and Lambert (1962) concluded that their 10-year-old French-English bilinguals performed better on tests of intellectual reasoning than did comparable monolinguals. They also found that the abilities of the bilinguals were more differentiated. This study, however,

First, although there is general agreement from research that growing up in a bilingual environment does not have a negative influence on skills such as language development (and could even provide an advantage across a range of social and communication areas), there is less clarity around other so-called 'bilingual advantages', for example, the ability to switch between tasks efficiently. We want to better understand these effects of bilingualism by looking in detail how cognitive ...
