According to Lipsey (1963), this state of non availability of jobs, brings about economic waste and cause human suffering. According to Fadayomi (1992) and Osinubi (2006), unemployment is as a result of the inability to develop and utilize the nations manpower resources effectively especially in the rural sector.

Research Paper (postgraduate) from the year 2020 in the subject Economy - Environment economics, University of Ibadan (Economics), course: Accounting, language: English, abstract: This study was carried out to examine the causes of unemployment in Nigeria and its effects on the economy of the country. Data were sourced from the Central Bank of Nigeria, Statistical Bulletin (2017), National Bureau of Statistics (NBS), Internet, CIA site, Index Mundi and past studies. The study covered period of 18 years, 1999 to 2017. EViews version 7 was used to analyze the data gathered, while Ordinary Least Squares (OLS) method was adopted. This study discovered that the unemployment in Nigeria is the major contribution to the poverty level in the country. Money supply and credit to private sector were recognized to have significant effect on unemployment level in the economy. It is also discovered that gross domestic product and unemployment rate in Nigeria has positive relationship which is an indication that growth in GDP does not amount to overall development in Nigeria. This study recommends that government should make credit available to private sector, increase money in circulation and try to reduce external debt which drain away the wealth of the nation through interest payments to reduce poverty rate in Nigeria.

Okwuagbala Uzochukwu Mike P picked it as a point of duty to write his first book on Nigerian issue after in-depth understanding of the society where he exists. In this book, he concentrates on the challenges that the youths in Nigeria face and the problems they cause to themselves and the country. Not only that, he suggested some practical ideas that can cause positive changes.In chapter one, discussed is an overview on who a youth is. It also discusses the benefits of being a youth. Youths in Nigeria do not have much to participate in when it comes to politics. There is fewer number of them and that is also what this section of the book covers. In chapter two of the book, the area of concentration is youth unemployment in Nigeria. The menace of youth employment has made many youths lose hope in the country. Areas covered in the chapter are: how Unemployment has affected the psychology of Nigerian youths, impact of youth unemployment on Nigeria economic growth, causes of youth unemployment in Nigeria, effects of youth unemployment in Nigeria, solutions to youth unemployment, and youth empowering organizations in Nigeria. Chapter three is a trending issue among Nigeria youths from different parts of the country. It covers drug abuse among the youths in the country. The subheadings discussed in this section are: what is drug abuse, effects of Marijuana, other adverse effects of drug abuse in general, solutions to drug abuse among Nigerian youths and drug abuse in Nigeria tertiary institutions.This book ends in chapter four and that is the most delicate topic among all the chapters of the book. There is no much written book on the title. In chapter four, you will be reading about the internet fraudster in Nigeria. These young scammers in Nigeria are often referred to as G or Yahoo boys. You will discover the tricks of these young boys who made their money early in dubious ways. Also, read the chapter to avoid being a victim of their scam.

Public debate in Nigeria on the country s progress since its return to democracy in 1999 has been dominated by two seemingly opposite themes. The first theme is the strong growth performance of the non-oil economy. This success has been marked by sharp increases in agriculture, trade, and construction and by the emergence of new industries in the financial, telecommunications, and entertainment sectors, supported by sound macroeconomic policies and structural reforms. The second, opposing theme is the seeming failure of Nigeria s much improved economic performance to reduce unemployment, especially among the young. Rising levels of unemployment have increased militancy among the young and impacted negatively on public order. 'Putting Nigeria to Work: A Strategy for Employment and Growth' looks at the ways in which Nigeria s improved economic performance has impacted the labor market. A number of relevant factors are carefully examined and analyzed, including industrial policy and the investment environment, the effects of restrictive trade policies on growth, and the ability of the technical and vocational education system to address the country s skills gap. The book proposes a strategy that will allow Nigeria to increase the availability of quality jobs, reduce rising youth unemployment, and sustain and further accelerate the country s economic performance and growth. At the core of this strategy are targeted interventions aimed at removing binding constraints to growth in sectors of the economy that are already growing fast, but have the potential to grow faster and have significant employment-creating potential.

This book explores the disturbing dimensions of the problem of insecurity in Nigeria, such as herdsmen violence, the Boko Haram insurgency, cybercrime, militancy in the Niger Delta, communal conflict and violence, as well as police corruption. It offers a comprehensive discussion of the theoretical foundations of internal security, the threats to internal security, the role of formal and informal agencies in internal security management and the challenges of internal security management.

The achievements and legacy of the Wolfensohn Center for Development at Brookings The Imperative of Development highlights the research and policy analysis produced by the Wolfensohn Center for Development at Brookings. The Center, which operated from 2006 to 2011, was the first home at Brookings for research on international development. It sought to help identify effective solutions to key development challenges in order to create a more prosperous and stable world. Founded by James and Elaine Wolfensohn, the Center’s mission was to “to create knowledge that leads to action with real, scaled-up, and lasting development impact.” This volume reviews the Center’s achievements and lasting legacy, combining highlights of its most important research with new essays that examine the context and impact of that research. Six primary research streams of the Wolfensohn Center’s work are highlighted in The Imperative of Development: the shifting structure of the world economy in the twenty-first century; the challenge of scaling up the impact of development interventions; the effectiveness of development assistance; how to promote economic and social inclusion for Middle Eastern youth; the case for investing in early child development; and the need for global governance reform. In each chapter, a scholar associated with the particular research topic provides an overview of the issue and its broader context, then describes the Center’s work on the topic and the subsequent influence and impact of these efforts. The Imperative of Development chronicles the growth and expansion of the first center for development research in Brookings’s 100-year history and traces how the seeds of this initiative continue to bear fruit.

Unemployment among educated youths is a serious phenomenon in Nigeria. It constitutes a problem not only for the youths themselves but to the overall social, political and economic structures of the country. Therefore, it is important to conduct an empirical investigation on this issue in order to generate data which are needed in resolving youth unemployment. The present study aimed at examining the causes and consequences of unemployment among the educated youths in Kano, Nigeria. It also examined the reasons why some of them engaged in deviant behaviours. The role of government in eradicating this problem was also investigated. To ensure a comprehensive analysis of data, the study used a qualitative method. This involved in-depth interviews with 20 respondents whose responses were coded into themes according to the objectives of the study. The study revealed that unemployment among the respondents was triggered by a wide range of demographic, economic, social, psychological and cultural factors. Depending on the youths' psychological make-up and available resources, the findings show that unemployment had both detrimental and beneficial effects on the unemployed youths. In terms of negative outcomes, the results show that they suffered from poverty and experienced a wide range of health and psychological problems. Furthermore, some of them developed a negative outlook in life and became vulnerable to crime and deviation. However, unemployment also provided them an opportunity to be creative, resourceful and religious in order to cope with the crisis. In addition, the study also shows that despite the harsh effects of joblessness, very few were involved in deviant behaviours due to religiosity. The reasons for their involvement in crime and deviation are deprivation, frustration, feeling of rejection, lack of endurance and emotional trauma. Furthermore, the results also reveal that the government has a critical role to play in promoting the employability of educated youths. Therefore, the findings of the study call for a comprehensive and multi-dimensional approach to address the unemployment problem of this important segment of the Nigerian population.

An award-winning professor of economics at MIT and a Harvard University political scientist and economist evaluate the reasons that some nations are poor while others succeed, outlining provocative perspectives that support theories about the importance of institutions.

Some 600 million children worldwide do not legally exist. Without verifiable identification, they—and unregistered adults—could face serious difficulties in proving their identity, whether to open a bank account, purchase a SIM card, or cast a vote. Lack of identification is a barrier to full economic and social inclusion. Recent advances in the reach and technological sophistication of identification systems have been nothing less than revolutionary. Since 2000, over 60 developing countries have established national ID programs. Digital technology, particularly biometrics such as fingerprints and iris scans, has dramatically expanded the capabilities of these programs. Individuals can now be uniquely identified and reliably authenticated against their claimed identities. By enabling governments to work more effectively and transparently, identification is becoming a tool for accelerating development progress. Not only is provision of legal identity for all a target under the Sustainable Development Goals, but this book shows how it is also central to achieving numerous other SDG targets. Yet, challenges remain. Identification systems can fail to include the poor, leaving them still unable to exercise their rights, access essential services, or fully participate in political and economic life. The possible erosion of privacy and the misuse of personal data, especially in countries that lack data privacy laws or the capacity to enforce them, is another challenge. Yet another is ensuring that investments in identification systems deliver a development payoff. There are all too many examples where large expenditures—sometimes supported by donor governments or agencies—appear to have had little impact. Identification Revolution: Can Digital ID be Harnessed for Development? offers a balanced perspective on this new area, covering both the benefits and the risks of the identification revolution, as well as pinpointing opportunities to mitigate those risks.

This book focuses on the implementation of AI for growing business, and the book includes research articles and expository papers on the applications of AI on decision-making, health care, smart universities, public sector and digital government, FinTech, and RegTech. Artificial Intelligence (AI) is a vital and a fundamental driver for the Fourth Industrial Revolution (FIR). Its influence is observed at homes, in the businesses and in the public spaces. The embodied best of AI reflects robots which drive our cars, stock our warehouses, monitor our behaviors and warn us of our health, and care for our young children. Some researchers also discussed the role of AI in the current COVID-19 pandemic, whether in the health sector, education, and others. On all of these, the researchers discussed the impact of AI on decision-making in those vital sectors of the economy.
