This book is about the interrelated technological developments of war and cinema, how they have been driven by the military imperative of needing to represent the battlefield in order to make operational decisions. The battlefield is a field of perception for the general and weapons are tools of perception.

the supply of bullets must be supplemented by the supply of images (the logistics of perception). according to virilio, war reaches its height in the functional and the phenomenological convergence or the "fateful confusion" of eye and weapon, best exemplified by the infrared laser aided missile tech in which the missile is literally guided by the pilot's gaze. there is also a co-incidence of war and cinema, as cinematic sensibility has increasingly come to substitute regular perception ...

War and cinema : the logistics of perception. In this seminal work, Paul Virilio conducts a sweeping analysis of perception in an age of astounding visual impact. Through a technical history of weaponry, photography, and cinematography, an account of key war strategists and movie directors, and a narrative that places pin-up girls alongside satellite feeds and ranges from Hollywood to Hitler's bunker, Virilio shows how military ways of seeing have transformed the world as we know it.

From the synchronised camera/machine-guns on the biplanes of World War One to the laser satellites of Star Wars, the technologies of cinema and warfare have developed a fatal interdependence. Hiroshima marked one conclusion of this process in the nuclear "flash" which penetrated the city's darkest recesses, etching the images of its victims on the walls.

War and Cinema: The Logistics of Perception, a 1989 book by Paul Virilio, discusses the relationship between image and war technology. Drawing on a number of films and film directors, including Sergei Eisenstein, Francis Ford Coppola, D.W. Griffith, and Stanley Kubrick, Virilio presents an postmodern analysis of how the representational methods of photography and cinema have impacted modern and historical warfare.

Logistics of perception. In contemporary warfare, logistics does not just imply the movement of personnel, tanks, fuel and so on, but also the movement of images both to and from the battlefield. Virilio talked a lot about the creation of CNN and the concept of the newshound. The newshound will capture images which will then be sent to CNN, which may

Download File PDF War And Cinema The Logistics Of Perception Paul Virilio

then be broadcast to the public.

~~Paul Virilio — Wikipedia~~

of 1940, here was a lighting war, with the use of the first tracer bullets, flares that lit up no-man's-land for nocturnal targets; powerful search-lights with a range of nine kilometres, and early anti-aircraft defence systems.

The old adage, 'The cavalry lights the way, the infantry wins the day', now well and truly belonged to the past. As the front settled into

Looking at how the technologies of cinema and warfare have developed a fatal interdependence, this book explores these conjunctions from a range of perspectives. It gives a detailed technical history of weaponry, photography and cinematography, with accounts of films and military campaigns.

□ One of the most original thinkers of our time. □ --Libération

Desert Screen is a vision of future war. Paul Virilio identifies the Gulf War as a turning point in history, the last industrial and the first information war. Virilio argues that we live in a world still exhausted from the geopolitics of the Cold War, a world in which the politics of military and media technology seem to preclude the possibility of negotiation and diplomacy. This new translation of an already classic text includes a new interview with Virilio in which he looks back at a decade of war at the speed of light.

Writing on the relationship between war and cinema has largely been dominated by an emphasis on optics and

Download File PDF War And Cinema The Logistics Of Perception Paul Virilio

weaponised vision. However, as this analysis of the Hollywood war film will show, a wider sensory field is powerfully evoked in this genre. Contouring war cinema as representing a somatic experience of space, the study applies a term recently developed by Derek Gregory within the theoretical framework of Critical Geography. What he calls "corpography" implies a constant re-mapping of landscape through the soldier's body. These assumptions can be used as a connection between already established theories of cartographic film narration and ideas of (neo)phenomenological film experience, as they also entail the involvement of the spectator's body in sensuously grasping what is staged as a mediated experience of war. While cinematic codes of war have long been oriented almost exclusively to the visual, the notion of corpography can help to reframe the concept of film genre in terms of expressive movement patterns and genre memory, avoiding reverting to the usual taxonomies of generic texts.

" --ChoiceSurveying art history as well as the technologies of war and urban planning, one of France's leading intellectuals provides an introduction to a new "logistics of the image."

How perceptual technologies have shaped the history of war from the Renaissance to the present From ubiquitous surveillance to drone strikes that put "warheads onto foreheads," we live in a world of globalized, individualized targeting. The perils are great. In *The Eye of War*, Antoine Bousquet provides both a sweeping historical overview of military perception technologies and a disquieting lens on a world that is, increasingly, one in which anything or anyone that can be perceived can be destroyed—in which to see is to destroy. Arguing that modern-day global targeting is dissolving the conventionally bounded spaces of armed

Download File PDF War And Cinema The Logistics Of Perception Paul Virilio

conflict, Bousquet shows that over several centuries, a logistical order of militarized perception has come into ascendancy, bringing perception and annihilation into ever-closer alignment. The efforts deployed to evade this deadly visibility have correspondingly intensified, yielding practices of radical concealment that presage a wholesale disappearance of the customary space of the battlefield. Beginning with the Renaissance's fateful discovery of linear perspective, *The Eye of War* discloses the entanglement of the sciences and techniques of perception, representation, and localization in the modern era amid the perpetual quest for military superiority. In a survey that ranges from the telescope, aerial photograph, and gridded map to radar, digital imaging, and the geographic information system, Bousquet shows how successive technological systems have profoundly shaped the history of warfare and the experience of soldiering. A work of grand historical sweep and remarkable analytical power, *The Eye of War* explores the implications of militarized perception for the character of war in the twenty-first century and the place of human subjects within its increasingly technical armature.

A critic of the art of technology, Paul Virilio has taught us that much media image is a strategy of war and that accident is becoming indistinguishable from attack. In these times of fierce conflict over which kind of capitalism is to take over the shrinking globe, and indeed which modernities we will live in during the twenty-first century, Paul Virilio is a significant contemporary theorist. But Virilio's work, originally published in French and stretching back to the 1950s, has until now been very difficult to access in full in English translation, available as it is in expensive little books or obscure catalogues and journals. The *Paul Virilio Reader* collects together for the first time readable extracts of Virilio's work

Download File PDF War And Cinema The Logistics Of Perception Paul Virilio

from the entire range of his career. It is prefaced by an editorial introduction showing that Virilio has produced important - if controversial - 'theory at the speed of light' that can uncannily illuminate the impact of new information and communications technologies in a world which collapses time and distance as never before. Features* Extracts have been carefully selected to reflect the whole of Virilio's diverse career* A chronological ordering illustrates the development, and interconnectedness, of Virilio's work* Each extract is prefaced by a bibliographical and contextual commentary, and the book is completed by an innovative guide to reading Virilio.

Virilio and Lotringer revisit their prescient book on the invisible war waged by technology against humanity since World War II. In June 2007, Paul Virilio and Sylvère Lotringer met in La Rochelle, France to reconsider the premises they developed twenty-five years before in their frighteningly prescient classic, *Pure War*. *Pure War* described the invisible war waged by technology against humanity, and the lack of any real distinction since World War II between war and peace. Speaking with Lotringer in 1982, Virilio noted the "accidents" that inevitably arise with every technological development: from car crashes to nuclear spillage, to the extermination of space and the derealization of time wrought by instant communication. In this new and updated edition, Virilio and Lotringer consider how the omnipresent threat of the "accident" both military and economic has escalated. With the fall of the Soviet bloc, the balance of power between East and West based on nuclear deterrence has given way to a more diffuse multi-polar nuclear threat. Moreover, as the speed of communication has increased exponentially, "local" accidents like the collapse of the Asian markets in the late 1980s escalate, with the speed of contagion, into global

Download File PDF War And Cinema The Logistics Of Perception Paul Virilio

events instantaneously. "Globalization," Virilio argues, is the planet's ultimate accident. Paul Virilio was born in Paris in 1932 to an immigrant Italian family. Trained as an urban planner, he became the director of the École Speciale d'Architecture in the wake of the 1968 rebellion. He has published twenty-five books, including *Pure War* (1988) (his first in English) and *The Accident of Art* (2005), both with Sylvère Lotringer and published by Semiotext(e). Sylvère Lotringer, general editor of Semiotext(e), lives in New York and Baja California. He is the author of *Overexposed: Perverting Perversions* (Semiotext(e), 2007) and other books.

In books such as *The Aesthetics of Disappearance*, *War and Cinema*, *The Lost Dimension*, and *The Vision Machine*, Paul Virilio has fundamentally changed how we think about contemporary media culture. Virilio's examinations of the connections between perception, logistics, the city, and new media technologies comprise some of the most powerful texts within his hypermodern philosophy. *Virilio and the Media* presents an introduction to Virilio's important media related ideas, from polar inertia and the accident to the landscape of events, cities of panic, and the instrumental image loop of television. John Armitage positions Virilio's essential media texts in their theoretical contexts whilst outlining their substantial influence on recent cultural thinking.

Consequently, Armitage renders Virilio's media texts accessible, priming his readers to create individual critical evaluations of Virilio's writings. The book closes with an annotated and user-friendly Guide to Further Reading and a non-technical Glossary of Virilio's significant concepts. Virilio's texts on the media are vital for everyone concerned with contemporary media culture, and *Virilio and the Media* offers a comprehensive and up to date introduction to the ever expanding range of his critical media and cultural works.

Focusing on the logistics of perception, this title introduces the author's understanding of 'picnolepsy' - the epileptic state of consciousness produced by speed, or rather, the consciousness invented by the subject through its very absence: the gaps, glitches, and speed bumps lacing through and defining it.
